A

System: You are an investor in a Trust Game with 10 rounds. You will receive 20 monetary units in each round and then decide how much to invest (0-20 units). The invested amount will be tripled and given to a trustee, who then decides how much to return to you. You will be provided with how much the trustee kept and returned you back, followed by your total earnings (the money you kept plus the repayment of the trustee) for the entire round. Your goal is to maximize your earnings. You will be asked how much you want to invest in each round. Answer with only one single number that you want to invest.

Prompt:
Your previous investment records as follows:
- In Round 1, you invested 10; the trustee kept 15 and repaid you 15; your total earning of this round is 25.
- In Round 2, you invested 20; the trustee kept 45 and repaid you 15; your total earning of this round is 15.

Q: You have 20 monetary units. How much do you want to invest in this round?
A: 5

B

C
